

ANTIFOAM

Agricultural Strength Deformer and Foam Suppressant

Features:

- Designed specifically for defoaming agricultural spray tanks.
- Aids safety
- Economical and non-toxic
- Simple to use

ANTIFOAM is a highly concentrated, high strength silicone emulsion defoamer which kills foam in its tracks, and prevents the reforming of foam.

Agricultural spray tank solutions may contain various hazardous substances that may generate foam. If the foam were to overflow the tank on areas not meant for these chemicals, damage may occur.

ANTIFOAM solves the problem by stopping the foam, and preventing it from reforming. The use of **ANTIFOAM** also speeds up the filling of tanks by not having foam to contend with.

Directions for use:

To kill existing foam

Stop tank agitation, and add **ANTIFOAM** across the surface of the foam. When foam starts to drop, restart agitation. Usually 15-30 ml of **ANTIFOAM** will be effective per 400 litres of solution.

To prevent foam formation

Add water to tank first, add 15-30 ml of **ANTIFOAM** while agitator is running to ensure even dispersion, then add the other chemicals to tank.
