

INNOVATIVE and AUSTRALIAN

BARMAC AUTOFERT RANGE

BARMAC AUTOFERT RANGE

RAPID GROWTH

AUTOFERT is a liquid fertiliser that represents the modern concept of comprehensive feeding to produce rapid and reliable growth. The **AUTOFERT RANGE** is ideal where rapid growth is required. **AUTOFERT** also provides a foliar nutritional source where a poor root system, incorrect pH and or excessive compaction restricts nutrient uptake.

POLYFLAVONOIDS

The **AUTOFERT RANGE** allows a N:P:K source to be combined with a trace element package in the polyflavonoid form. Polyflavonoids are the ultimate in chelating compounds as they insure that trace elements are supplied in a form to the plant irrespective of pH. These trace elements are coated in an organic complex which stops them being tied up in the soil or spray tank.

AUTOFERT 14-3-5 + TRACE

Allows rapid growth plus provides trace elements.

AUTOFERT N Fe 14-0-0 + Fe

A high quality foliar fertiliser which supplies both Nitrogen and Iron. Iron is supplied as a combination of both chelate and sulphate allowing availability to both the soil and leaf.

AUTOFERT K 0-0-30

High quality potassium source available as a carbonate/citric complex. The carbonate/citric complex has a low salt index and is ideal for use on greens and fairways.

AUTOFERT K 0-0-8.3 + Si

A specifically formulated blend of silica and potassium to provide a hard wearing sword. Will also help promote disease tolerance, drought tolerance, heavy metal tolerance and resistance to saline stress conditions.
