

INNOVATIVE and AUSTRALIAN

## CoRoN GREENS & TEES

10—1—10 + IRON. Liquid controlled fertilizer

*CoRoN GREENS & TEES is a liquid controlled release fertilizer. Nitrogen is present primarily as the slow release Polymethylene Urea. Free Urea is also available for a quick initial response.*

When applied **CoRoN GREENS & TEES** is either taken up through the foliage of the plant or bonded to the soil. Both the CoRoN in the plant and in the soil are released over a controlled period of time by bacterial activity. Depending on the application rate and prevailing temperature, **CoRoN GREENS & TEES** will generally release over a 6-8 week period.

**CoRoN GREENS & TEES** incorporates the patented CoRoN technology into a high quality liquid fertilizer with a balance N: K ratio. Because of their liquid foliar and low burn features all CoRoN products can be safely applied to the leaf of the turf without risk of burn. Unlike competitor products they do not need to be watered in. **CoRoN GREENS & TEES** combines all the benefits of slow release Mv technology with the safety and precision that can only be achieved with liquid fertilizer.

### USING CoRoN GREENS & TEES

Apply **CoRoN GREENS & TEES** in the recommended volume of water. There is no need for any additional watering in.

- Reliable controlled release nitrogen source
- Foliar uptake reduces losses and gives maximum efficiency
- Low leaching and volatilization losses
- No burning, low salt index
- Superior turf colour
- No unpredictable or irregular flushes of growth
- Compatible with most pesticides and fertilizers
- Reducing clippings, increased root development
- Liquid formulation ensures even coverage, no mower pickup
- Will not damage spray equipment or clog nozzles
- Manufactured in Australia

### PACK SIZE:

Available in 20 L container
