

# ORGANIC FRUIT FLY TRAP

An effective and environmentally appropriate solution to the problem of Mediterranean Fruit Fly (*Ceratitis capitata*) and Queensland Fruit Fly (*Bactrocera tryoni*)

## HOW CERA TRAP WORKS

Cera Trap contains a unique protein based liquid solution that is very attractive to both female and male fruit flies. Once the lid is removed from the bottle, the smell of the liquid lures the fruit flies into the specially designed trap. Unable to escape they remain in the trap and drown in the liquid.

The organic liquid contains no pesticides and will continue to work even after many flies are drowned in the liquid.

## WORKS ON:

Apples, Apricots, Blueberries, Cherries, Grapes, Grapefruit, Guava, Lemons, Limes, Mandarin, Mangoes, Oranges, Passionfruit, Pawpaw, Peaches, Pears, Plums, Nectarines

## TARGETS:

Queensland and Mediterranean Fruit Flies. Works on both sexes but targets females and breaks the breeding cycle.

## WHEN TO USE:

It is important to control fruit fly numbers before they start attacking the fruit. Cera Trap should be hung in trees when the fruit are small & still developing. Ideally hang the traps when fruit reaches approximately one third of its final size.
