

INNOVATIVE and AUSTRALIAN

DELTA FORCE PLUS

Effective for both porous and non-porous surfaces

A broad spectrum, fast acting insecticide with flushing and knockdown properties that make it particularly effective against pests such as German Cockroaches.

Active Constituents: 10g/L DELTAMETHRIN
10g/L D-TETRAMETHRIN
80g/L PIPERONYL BUTOXIDE

USE:

Delta Force Plus combines the residual action of deltamethrin with d-tetramethrin and the synergist action of piperonyl butoxide to give enhanced flushing and very rapid knockdown. Pests don't have the time to spread to other areas. The residual nature of the deltamethrin component means insect pests are controlled on re-entry to treated areas.

Delta Force Plus is effective for both porous and non-porous surfaces. It is typically used as a surface spray and is non-staining. It will control a wide variety of insect pests and has rapid activity against problem insects such as spiders, where quick results are often required.

SAFETY:

As a member of the synthetic pyrethoid group Delta Force Plus has very low toxicity. It is very safe when applied according to label directions. Contact by customers is usually minimal after correct application.

PACK SIZE:

Available in 1 Litre and 5 Litres.
