

# WETTABLE SULPHUR

**FUNGICIDE & MITICIDE**

**800g/kg sulphur**

This cost effective product has been well established as an effective protectant fungicide for many years. It is widely used in many crop production systems from high value vegetables to tree crops. It is also used in ornamental situations. The product is noted for its ability to suppress mite populations. It should not be considered more than a suppressing agent and eradicant products should be used in spray programs.

**Mode of action:**

Sulphur acts as a spore killer. Spores will accumulate Sulphur when in contact with the fungicide or through vapors. Sulphur, acting as hydrogen sulphide will interfere with important hydrogenation and dehydrogenation processes in fungal spores.

See product label for full crop listings.
